This was a year of strong results for Global Partnerships (GP) coupled with unprecedented challenges posed by the global pandemic.

By the numbers this year, impact-first investing by GP-managed funds brought opportunity to nearly 4.9 million people living in poverty in 23 developing countries. The breadth of our investing increased to 16 active initiatives across different facets of poverty in livelihoods, education, energy, health, housing, and sanitation. Across all affiliated funds, GP grew its combined portfolio to approximately $125 million at fiscal year-end. GP also continued to effectively leverage philanthropy - with every philanthropic dollar enabling more than thirty dollars of fund capital at work, making a difference in peoples’ lives.

Beyond the numbers, this year was defined in many ways by the global pandemic, which brought extreme hardship for people living in poverty along with compelling reminders of their resilience.

While the effects of the pandemic vary across the countries where we invest, we have witnessed those living in poverty experience precipitous declines in household incomes, rising food insecurity, and heightened risks of exposure to the coronavirus. Many microentrepreneurs’ businesses were shuttered as informal markets closed and transportation systems shut down. Smallholder farmers have been vulnerable to interruptions in logistics, making it harder to obtain seeds or fertilizer and get crops to market. People living in crowded informal settlements have limited ability to practice preventive measures such as social distancing, thus living at greater risk of illness. There are signs that decades of developmental progress could be reversed, with millions of people slipping more deeply into poverty.
In the face of these challenges, we have also witnessed resilience and adaptation – by clients served and by our social enterprise partners that support them. Some microentrepreneurs, such as Blanca (featured later in this report), are reinventing their businesses while some social enterprise partners such as Friendship Bridge are providing critical support by restructuring microloans and adapting training programs. Through our use of mobile-based client surveying known as Lean Data℠, we have seen the positive impact these investments can have, especially when it comes to empowering women and enhancing the economic resilience of households living in poverty.

The role of thoughtful, impact-first investors has never been more important. Global Partnerships is working with each of our 91 social enterprise partners to understand and support their efforts to respond to the pandemic and to the changing needs of their clients. At the same time, we are bringing discipline to the process of helping these social enterprises develop viable plans to emerge from the pandemic as sustainable and growing entities that can serve people living in poverty in future years. We are committed to preserving impact in this moment and keeping our eye on the long-term need for sustainable global development.

Thank you to all of our donors and investors. Your compassion and ongoing commitment make this work possible.

With Gratitude,

Rick Beckett
CEO
Global Partnerships

---

All numbers in this report above one million are rounded to the nearest 100,000.

* $5.50 PPP/person/day. Purchasing Power Parity (PPP) is a metric that compares different countries’ currencies through a “basket of goods” approach.

** These figures are as of June 30, 2020. “% female” data was reported by 73 out of 91 current partners; “% rural” data was reported by 70 out of 91 current partners.

*** All lives impacted figures in this report are estimated numbers of lives impacted (between July 1, 2019 and June 30, 2020) as a result of investments in partners by GP funds and out-of-fund investments.

**** Based on responses from 3,455 clients of ten partners within GP’s debt funds (Social Investment Fund 5.0, LLC [SIF 5.0]; Social Investment Fund 6.0, LLC [SIF 6.0]; and Impact-First Development Fund [IFDF]). Some partners have investments from more than one fund. Responses were collected before June 30, 2020 through mobile-based client surveying methodology known as Lean Data™. This figure is a weighted average by number of respondents. Results are not statistically significant nor representative of the outcomes achieved by all investee partners. Results are intended to provide insight into whether investments can reach desired segments and support intended outcomes.

DEEPENING OUR UNDERSTANDING OF IMPACT

At the center of Global Partnerships’ mission are the clients served by our social enterprise partners. Our approach starts with the question: what products and services are truly making a difference for people living in poverty?

GP’s affiliated funds invest where evidence convinces us that people living in poverty not only have access to, but value the opportunity being delivered and are empowered by it – economically or otherwise – to improve their lives.

Then we listen to clients to understand the outcomes they experience.

For the last two years, we have worked together with 60 Decibels, Inc., an impact measurement company, to employ their mobile-based survey methodology known as Lean DataSM in our three active debt funds. At the close of June 2020, we had conducted ten assessments with social enterprise partners1 across seven countries in Latin America and sub-Saharan Africa. This work helped us hear directly from over 3,000 clients and gain deeper insight into their experiences and the outcomes they have realized through engagement with our partners.

“...capital for my business, my life is improved, bought land and completed my house and my children are in school.”

–A client response collected via Lean DataSM survey
“I have been able to buy land and build the house that I currently live in. I also pay my children’s school fees.”

“I didn’t go to school, but now I have enough capital that can support my family and relatives with school fees.”

“For the moment we lack nothing, things we need, things to eat, we are able to buy something or spend money for our health without having to borrow...”

“I have expanded my business which has enabled me to open several channels for earning income.”
GLOBAL PARTNERSHIPS aims to empower women and enhance the economic resilience of households living in poverty by investing in social enterprises that deliver gender-informed financial and educational services.

With feedback from over 2,300 female clients from seven social enterprise partners in GP’s Women-Centered Finance with Education (WCFE) initiative, we have gained confidence that fund investments are helping to empower women and enhance the economic resilience of client households.

Not only did 96 percent of female respondents report improvements in their quality of life, they also indicated signs of increased empowerment, economic resilience, and investments in the health and well-being of their households.

**EMPOWERMENT**

Empowerment is foundational in bringing about positive change in women’s lives. By providing access to financial services and education, GP’s WCFE partners aim to put resources in the hands of women living in poverty and empower them to have a say in how those resources are used. Of female survey respondents:

- **79%** reported an increase in their contribution to household decision-making.

**WHO IS SERVED**

Average Profile of Female Survey Respondent

- **38** years old
- **9** years of schooling
- **5.3** people living in her household

She is likely to report a lack of access to good alternative products and services.

**IMPROVING LIVES**

Women-Centered Finance with Education

Global Partnerships aims to empower women and enhance the economic resilience of households living in poverty by investing in social enterprises that deliver gender-informed financial and educational services.

**“I am like a boss lady in my house now. I can provide for myself now that I am selling. I am now a business woman.”**

**“I have money as a woman. I am independent and have greatly developed.”**
Progress out of poverty is not linear; households living below the poverty line often rise out of poverty only to fall back again. This volatility is made more acute by shocks such as a health emergency or unexpected loss of income. Well-designed financial products, when coupled with financial education, can foster economic resilience by supporting increased income, consumption smoothing, and lower-stress coping mechanisms such as savings. Of female survey respondents:

ECONOMIC RESILIENCE

COVID-19: CLIENT-CENTERED RESPONSE

Now more than ever, we are committed to keeping clients at the center of GP’s impact-first investment approach. During the COVID-19 pandemic, Lean Data is helping us understand the concerns and coping strategies of households living in poverty. While we expect experiences to vary by geography and sector, results from an initial assessment with ECLOF Kenya in June 2020 showed:

- 67% of respondents reported concern about COVID-19
- 85% of those concerned about COVID-19 reported their primary concern to be the economy or their ability to work and earn an income
- 94% of all respondents reported deterioration in their financial situation since the onset of the pandemic
- 47% reported changes in the number and/or quality of meals consumed by their household

Subsequent studies will continue monitoring these topics to help GP and its fund partners better serve people living in poverty during the pandemic and its aftermath.

“I have just made sure we have one meal per day that is supper and that is because whatever little money I am earning, it all goes to buying food.”
LIVELIHOODS

WOMEN-CENTERED FINANCE WITH EDUCATION

An estimated 1.7 billion adults lack access to formal financial services, and women are disproportionally excluded, with women in developing economies remaining nine percentage points less likely than men to have a bank account. GP funds aim to empower women and enhance the economic resilience of households living in poverty by investing in partners that deliver gender-informed financial and educational services.

Deo Nyandwi has been growing coffee since 1996, when he took over his family’s plot of 100 coffee trees. He cultivated his farming business over the years to support his family in the community of Mwito in western Rwanda. In 2018, Deo joined Rwanda Trading Company (RTC).

RTC is a partner in Global Partnerships’ Smallholder Farmer Market Access initiative.* RTC sources coffee cherries for export from smallholder farmers such as Deo, providing them with not only improved market access and price premiums, but also technical assistance that helps farmers obtain specialty certifications, increase their yields and improve the quality of the coffee.

With RTC’s support, Deo was able to increase production and, in turn, earn more annual revenue to support his household. Over time, Deo earned enough to purchase more land. He has now expanded his farm to 1,500 coffee trees. With the additional income, Deo built a new house for his family and pays for medical insurance and school fees each year for his eight children.

When the COVID-19 pandemic threatened to hit Rwanda in March 2020, the country instituted a shutdown. Deo’s children could no longer go to school. The shutdown also affected in-person training programs, such as RTC’s technical assistance program. In response, RTC adapted its model to communicate with its farmer clients by phone to provide vital consulting in a time of crisis.

“RTC trained us on how to save money,” Deo said. “Money we saved has helped us to buy necessary things during COVID-19.”

Food processing was deemed an essential activity, so Deo and other farmers could continue their work and deliver coffee to RTC wet mills without interruption. To protect RTC employees and farmers such as Deo, RTC requires social distancing and installed hand washing stations at each collection site.

“I was able to deliver my coffee production to the RTC station,” said Deo. “We implemented COVID-19 prevention measures on sites by wearing masks, washing our hands, and keeping safe distance between us.”

Despite the challenges that 2020 has introduced, Deo remains steadfast and optimistic, saying that he plans to keep expanding his coffee farm. RTC’s support, through the provision of tools and opportunity, reinforces Deo’s resilience, even in the face of a global pandemic and economic shutdown.

* As of June 30, 2020, RTC was a borrower of Global Partnerships Social Investment Fund 6.0, LLC.
LIVELIHOODS

SMALLHOLDER FARMER MARKET ACCESS

Globally, about 84% of farms are operated by smallholders with less than 2 hectares of land. Smallholder farmers often have limited access to markets, fair prices and quality agronomic technical assistance. GP funds aim to improve the economic position of smallholder farmers and their families by investing in agricultural enterprises that provide enhanced market access and technical assistance.

CLIENT STORY

Life changed drastically when COVID-19 struck Guatemala in March 2020, with curfews imposed, public transportation shut down, and markets closed or operating with greatly reduced hours. Microentrepreneurs like Blanca Margarita Méndez Pac saw a sharp drop-off in sales and a rise in household challenges, compounded by the effects of poverty and gender inequity.

Blanca is an indigenous Mayan woman who lives on the outskirts of Quetzaltenango, Guatemala. Over the past 10 years, Blanca has been a client of Friendship Bridge, a partner in Global Partnership’s Women-Centered Finance with Education and Health initiatives.* She has spent the last decade building her textile business with the support of affordable loans, education, and health services from Friendship Bridge.

“It is really practical and easy to work with Friendship Bridge because the organization does not have so many requirements like other credit organizations,” Blanca said. “Some of the advantages are accessibility and low interest rates. Because of this, I have been able to earn more income and provide better living conditions for my family, including the education of my children and the health needs of all of us.”

Blanca’s business, which she named “Costuras y Artesanías Manos de Mujer” (Sewing and Crafts Women’s Hands), is now in Friendship Bridge’s Advanced Artisan program. The program provides in-depth training and access to local, national, and international markets. Training topics range from quality control and diversification of products to marketing and exportation.

The health and economic crises caused by the COVID-19 pandemic have increased the family’s financial reliance on Blanca’s business. Her husband has diabetes, making him more susceptible to the virus, so it is difficult for him to leave the house. Blanca also covers the educational expenses of two of her children who are in the 8th and 9th grades.

During the pandemic, Blanca has demonstrated the resilience of her business, working from home and pivoting to sew masks with filters. She sells her masks by the dozen and over time, her customers have requested other textiles such as sheets and tablecloths.

“One learns by trial and error and obviously my first samples needed adjustments,” Blanca said. “Because of the advice that I have been given, I now successfully sew four different designs.”

GP’s funds aim to walk alongside people like Blanca, who are battling poverty amidst a pandemic. We provide social enterprise partners such as Friendship Bridge with affordable capital they need as they weather this crisis, helping them to stay focused on delivering impactful goods and services. And like Blanca, Friendship Bridge has adapted to the challenges of these unprecedented times. They now provide communication and training opportunities via mobile phone for their clients.

“We can telecommute and get quality advice that helps us to move forward,” Blanca says.

Blanca continues as an active participant in Friendship Bridge’s Advanced Artisan Program and now has 12 unique products marketed in her own name.

* As of June 30, 2020, Friendship Bridge was a borrower of Global Partnerships Social Investment Fund 5.0, LLC.
